一、 Vocabulary and Phrases translation(中翻英、英翻中)：(20 分)

- (一) 擒拿術
- (二) 落地簽證
- (三) 驅逐出境
- (四) 未成年者
- (五) 緩刑
- (六) an extortion ring
- (七) Internet auction fraud
- (八) reckless motorcyclists
- (九) (to) conduct an impartial investigation
- (十) large-scale nuclear incidents

二、 Passage Translation：(30 分)

(I) Please translate the following passage into correct Chinese：

In 1999, a teenage girl was taken from a Haitian orphanage and smuggled — using fake documentation — into Miami, where she was forced to work as a domestic servant for up to 15 hours a day, seven days a week. She was never paid, not allowed to go to school, occasionally beaten, and subjected to other inhumane treatment. After suffering for nearly six years, she managed to escape in 2005. This March, justice was finally served when three of her captors were convicted in the case. This is just one of hundreds of heart-breaking human trafficking cases the FBI investigates each year.

(II) Please translate the following passage into correct English：

一般人相信，要保持健康，人們應該盡量避免生活中的壓力源。然而，這種策略效果有限。想避免壓力也可能導致人們避免人生中有意義的改變，諸如工作的改變或升遷。此外，試圖去避免壓力通常也不切實際。舉例而言，一個人怎能避免生命中父母親過世的打擊？事實上，假如人們不去面對人生的一些壓力，到頭來終將覺得無聊和缺乏刺激，這對身體也可能有害。

三、 Reading Comprehension：(20 分)

David:

I'll be away for a week but my grandfather will let you in to use the computer. There are a few things you need to know. Brian Lee will call on Tuesday night and ask for information on our class science project. Please see the appropriately labeled files in the folder of that name in My Documents. He will ask you some specific questions and you may answer, but giving him any numerical information from the "SCIPorjData" file is something we might regret later, because we don't want other teams to copy our data.

Also, I've had some trouble with the computer recently. I wanted to get it fixed last week but had no time. There are unexpected crashes about once an hour and mysteriously deleted files around once a week, so back everything up on an ongoing basis. The best way is just to burn it onto a CD after you finish working each day, but save your work every five minutes or so to avoid losing it in a crash.

One last thing: Go ahead and download music if you want but don't add any new names to the approved lists for my peer-to-peer music sharing software. I don't want strangers poking through my computer.

Have fun!

Jerry

Every year in Nepal, young men answer a call to recruitment for one of the most feared and respected groups of soldiers in the world – the Gurkhas. On a typical year, 28,000 will come, yet only about 230 will be chosen to join the ranks of some 3,500 elite soldiers. Surprisingly, these soldiers fight not for their own country, but for the United Kingdom.

During the time of British domination of the Indian subcontinent, British soldiers encountered many stubborn enemies, though few as tough and warlike as the Gurkhas. After the Anglo-Nepali war (1812-1815) the British, so impressed by their adversaries, recruited several regiments of Gurkha soldiers to join the colonial army. They have not regretted this decision, as the Gurkhas' incredible toughness, ferocity and loyalty have won them great respect and many formal honors in numerous conflicts across the world.

Thus, the British Army maintains the Brigade of Gurkhas to this day, although its soldiers are all Nepalese citizens. In recent years, however, there have been signs of strain in the relationship. This is due to the growing controversy surrounding the disparity in pay between the Gurkhas and regular UK servicemen, with the later making far more money than the former.

4. Why is there growing strain in the relationship between the Gurkhas and the British Army?
(A) The Gurkhas make more money than the regular UK servicemen.
(B) The Gurkhas make less money than the regular UK servicemen.
(C) The Gurkhas are Nepalese but serve in the British Army.
(D) Not enough Gurkhas are chosen from among the potential recruits.
5. The word "surrounding" is underlined to mean ...
(A) On all sides (B) Close to
(C) Between (D) About
6. Which of the following is true?
(A) Only 230 out 3,500 recruits are selected annually.
(B) Only 3,500 out of 28,000 recruits are rejected annually.
(C) Only 230 out 28,000 recruits are selected annually.
(D) Of 28,000, approximately 230 are rejected annually.
7. Which of the following would be the best title for this article?
(A) The Soldiers of Nepal (B) A History of the Gurkhas
(C) The Gurkhas, Fierce and Loyal Soldiers (D) Money Problems in the British Army

A seized goods auction sale will take place at 8 AM on Friday, December 10th at the Yellow Dog Fairground in Carleton Place Township. The fairground is located on Highway 15 just north of the town center. For sale by auction will be light trucks, SUVs, sedans, motorcycles and off-road vehicles. All vehicles have been given basic overall mechanical appraisal and repairs. They have also been cleaned and are free from all stains and illegal materials.

All interested members of the public 18 years old and above are invited to the fairground at the above time and place. All potential buyers must register in advance of the auction and may do so on-site or through our website, www.CPpolice.gov. Registration must be completed before 8 AM. Bidders must have credit cards with verifiable limits above the sale price, or pay by cash or cashier's check. Security at the site will be provided by the Carleton Place Sheriff's department. To view our catalogue, please see our website.

8. Why are most of these vehicles being offered for sale?
Choose the best possible answer from the choices below.
(A) Because there is an auction.
(B) Because they were confiscated from rich people.
(C) Because they were used in crimes.
(D) Because they were too expensive for the police.
9. What is something that ISN'T required in order to participate in the auction?
(A) Prove of age (B) Knowledge of vehicles
(C) Advanced registration (D) The necessary funds
10. The word “fairground” used repeatedly in the article is closest in meaning to which of the following definitions?
(A) Police-owned land

二、Translation：(30 分)

1. Policy assessment studies in the 1970s cast doubt on the effectiveness of these strategies for preventing crime. For instance, the experimental study of preventive patrol in Kansas City found that changing the level of patrol coverage had no effect on crime and citizen fear of crime. Other evaluative research showed that rapid response to calls for service from citizens didn't increase the likelihood of preventing a crime or apprehending an offender. Finally, evidence from dozens of studies suggests that traditional police strategies to reduce, control, or prevent crime are ineffective.
2. The safeguards introduced under the Police and Criminal Evidence Act, such as an impartial custody officer, a right to free legal advice, strict time limits on the length of detention and the tape-recording of interviews, have subsequently made it more difficult for the police to engage in 'fishing expeditions', to detain suspects without firm grounds for doing so, to make informal deals with them or to apply physical or psychological pressures to induce them to confess.
3. In a study of miscarriages of justice in the USA where the convicted person had subsequently been completely exonerated as a result of DNA testing, it was found that the most common contributory factor was mistaken identity, which occurred in 52 percent of the cases. Caucasians misidentified African-Americans defendants in 35 percent of the cases, but African-Americans also misidentified other African-Americans in 24 percent of the cases.

三、Reading Comprehension：(20 分)

Concern for the environment in the US extends back into the nineteenth century, when nature lovers and sports enthusiasts first sought protection for areas of exceptional natural beauty or significance. But it was not until the late 1960's that environment concerns entered the mainstream of American political debate. By then many Americans had come to the conclusion that more development was not necessarily desirable, especially if it meant more polluted air, dying lakes and rivers, and a landscape strewn with unsightly waste, and crowded with sprawling construction projects. In May of 1970, several environmental groups staged the first Earth Day celebration, designed to heighten public awareness of environmental problems. The success of that initial effort led to it becoming a regular annual event.

During the 1950s and 1960s, industrial and vehicle pollution levels had become a serious threat to public health, so the environmental movement of this period focused heavily on restoring and ensuring the cleanliness of basic air and water supplies. Rapidly expanding development pressures were also **spurring** efforts to preserve unique lands and threatened wildlife habitats, and to protect the endangered species supported by them before they vanished into extinction. It is generally accepted that the environmental protection movement was so successful because of its grass roots support; groups of activists in hundreds of towns that took the initiative in cleaning up their own communities. During the 1970s, this local activism reinforced support for the passage of key laws at the national level, such as the Clean Water Act, Clean Air Act, Endangered Species Act, and National Environmental Policy Act, which together have constituted the foundation for environmental standards in the US ever since.

In addition to this national legislation, the year after the first Earth Day, by executive order, President Nixon established the Environmental Protection Agency (EPA); an organization dedicated to restoring and protecting the environment. The EPA **spearheaded** many contemporary efforts to protect the environment, but it was not working alone. It was allied with a wide variety of distinctly different and separate organizations ranging from a small number of well-funded high-profile national and international organizations to many thousands of smaller special interest groups and even individuals working at the local level. The EPA has now become one of the government's largest and most influential regulatory agencies. Through its own efforts and in cooperation with other organizations, it has earned a large measure of credit for protecting and restoring the quality of the environment in the United States.

Although one might assume that the cause of environmental protection would engender

universal support, it does have its detractors. One criticism that has been leveled against the movement is the claim that its predictions about the **dire** consequences of environmental damage have often been in error. Environmentalists counter this assertion by pointing out that their warnings have often brought about changes on the part of the public, the government and private industry, and that these changes prevented the predictions from being realized. However, just as it is often very difficult to gauge the impact of human activity on something as complex as the environment, it is equally difficult to determine which side is right in this debate. Because environmental issues cover such a wide range of concerns, this is a question that must be considered on a case by case basis. These voices of **dissent** have demonstrated to environmentalists the need to apply quantitative methods in assessing the extent of the destruction they have witnessed, or the degree to which their work has been manifested in actual improvement of the environment.

However vocal the critics of environmental protection efforts may be, given the very considerable body of environmental legislation that exists, it is safe to assume that their views do not represent the majority opinion. Private advocacy groups, the EPS, state legislatures and Congress have worked together to enact numerous laws regarding air and water quality, land use and waste management. That should be evidence enough of the broad extent of the popular support that underlies the movement.

1. On which of the following does the passage mainly focus?

 - (A) It suggested measures that would harm the economy.
 - (B) Its predictions could not be prevented through practical action.
 - (C) That it lacked the support needed to make any real progress.
 - (D) The environmental damage it claimed was not seen.

 - (A) It caused the environmentalists to change their methods.
 - (B) It decreased federal assistance for environmental protection.
 - (C) It diminished popular support for the EPA.

1. For many years, the law enforcement community has attempted to detect impaired drivers through numerous innovative efforts and measures. The problem of driving under the influence is well known throughout society, yet, even with all of the strategies used to remove these drivers from U.S. highways, it continues to cause needless and tragic loss of life each year. When will such madness end? When will society no longer tolerate drunk driving? Until that time, the law enforcement community must attempt to contain the carnage inflicted upon law-abiding citizens by impaired drivers.
2. 紐約市的美國銀行(Bank of America)遭到搶劫。兩名戴著面罩、武裝的搶匪進入銀行。有位女性共犯在幫助搶匪逃跑的車內等候他們。當搶匪跳到櫃台取走金錢後，其中一位搶匪進入金庫並企圖搶走更多的現金。很快地，搶匪離開了銀行，而在跳進車內時，掉了一包袋子。不久之後，一位制服巡邏員警發現這部協助嫌犯脫逃的車輛被棄置在距離銀行幾哩的地方。哪裡是第一犯罪現場？而哪裡又是第二犯罪現場？

三、Reading Comprehension：(20 分)

(I)

Internet dating has gone from daring to dull. As a result, many singles these days are looking to their cell phones instead of their laptops in an effort to locate love.

Cell phone technology now allows users to post tiny photographs and mini-profiles to a dating service mailbox, which can be visited by other cell phone users in search of a date. When a profile looks promising, users use their phones to send a text message to their person of interest.

Some phone dating services also are experimenting with ways to turn cell phone into homing devices. In other words, the phones can alert users to potential dates who may be just a short distance away — or, at the other end of the bar.

Europeans are heavily into phones dating, and China, which has 430 million cell phone users, also has embraced “mobile romance.”

The wireless service providers love phone dating, too, because all that text messaging pumps up their revenues. Analysts estimate that global mobile dating revenues were US \$31 million in 2005; by 2009, that figure is projected to reach US \$215 million.

Some people say that phone dating is more about flirting than about serious romance. “People who want to use their mobile devices are more interested in short-term relationships than people who want to use their computers,” said an officer of Match.com, a service with a quarter-million mobile users.

But, who really can say for sure. The next time the cell phones rings, it could be one calling Cupid.

1. Which is the function the dating service can offer through cell phones?
 - (A) Alerting users to potential dates.

三、Reading Comprehension：(20 分)

Most people can remember a phone number for up to thirty seconds. When this short amount of time **elapses**, however, the numbers are erased from the memory. How did the information get there in the first place?

Information that makes its way to the short term memory (STM) does so via the sensory storage area. The brain has a filter which only allows stimuli that is of immediate interest to pass on to the STM, also known as the working memory.

There is much debate about the capacity and duration of the short term memory. The most accepted theory comes from George A. Miller, a cognitive psychologist who suggested that humans can remember approximately seven chunks of information. A chunk is defined as a meaningful unit of information, such as a word or name rather than just a letter or number. Modern theorists suggest that one can increase the capacity of the short term memory by chunking, or classifying similar information together. By organizing information, one can optimize the STM, and improve the chances of a memory being passed on to long term storage.

When making a conscious effort to memorize something, such as information for an exam, many people engage in "rote rehearsal". By repeating something over and over again, one is able to keep a memory alive. Unfortunately, this type of memory maintenance only succeeds if there are no interruptions. As soon as a person stops rehearsing the information, it has the tendency to disappear. When a pen and paper are not handy, people often attempt to remember a phone number by repeating it aloud. If the doorbell rings or the dog barks to come in before a person has the opportunity to make a phone call, he will likely forget the number instantly. Therefore, rote rehearsal is not an efficient way to pass information from the short term to long term memory. A better way is to practice "**elaborate** rehearsal". This involves assigning semantic meaning to a piece of information so that it can be filed along with other pre-existing long term memories.

Encoding information semantically also makes **it** more retrievable. Retrieving information can be done by recognition or recall. Humans can easily recall memories that are stored in the long term memory and used often; however, if a memory seems to be forgotten, it may eventually be retrieved by prompting. The more **cues** a person is given (such as pictures), the more likely a memory can be retrieved. This is why multiple choice tests are often used for subjects that require a lot of memorization.

- 1、According to the passage, how do memories get transferred to the STM ?

二、Translation：(30 分)

- (一) For at least half a century, police have considered it important to cut to a minimum of their response times to crime calls. The faster the response, they have reasoned, the better the chances of catching the criminal at or near the scene of the crime. (10 分)
- (二) Officers shall not use their police power to resolve personal grievances (e.g. those involving the officer, family members, relatives, or friends) except under circumstances that would justify the use of self-defense, actions to prevent injury to another person, or when a serious offense has been committed that would justify an arrest. (10 分)
- (三) The essence of the police role in maintaining order is to reinforce the informal control mechanisms of the community itself. Areas where community controls break down are vulnerable to criminal investigation. (10 分)

三、Reading Comprehension：(20 分)

Another large-scale study conducted by William Spelman and Dale Brown and published in 1984 was also to challenge a core police assumption of that period – that improvement in rapid response to calls for service would lead to improvements in crime fighting. This study was developed in good part because of the findings of a prior investigation in Kansas City that found little support for the crime control effectiveness of rapid response to calls for service (Kansas City Police Department 1977). With support from the National Institute of Justice, Spelman and Brown investigated 4000 victims, witnesses, and bystanders in some 3300 serious crimes in four American cities. This was another major study in terms of the resources brought to bear and the methods used. Again it examined a strategy that was aided by technological advances in the twentieth century and that was central dogma of police administrators – that police must get to the scene of a crime quickly if they are to apprehend criminal offenders.

根據以上內容，用英文回答以下問題（每題 2 分）：

- （一）Spelman and Brown 的研究報告發表於哪一年？
- （二）在 Spelman and Brown 的研究之前，哪個城市警察局做過類似研究？
- （三）Spelman and Brown 的研究是在哪個部門的支持下進行？
- （四）Spelman and Brown 研究的實證資料係蒐集自幾個美國城市？

根據以上內容，用中文回答以下問題（每題 3 分）：

- （五）Spelman and Brown 所要挑戰的研究假設是什麼？
- （六）在 Spelman and Brown 研究之前的類似研究，有何研究發現？
- （七）Spelman and Brown 研究的實證資料來自 4000 個研究對象，這些研究對象是每個案件中的什麼人？
- （八）“dogma of police administrators”的意義為何？
